

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	01 October 2026
Team ID	SWTID-2026-4057
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming is used to encourage team participation in creative problem solving, generate multiple possible ideas, group related ideas, and prioritize the ideas according to their importance and feasibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement: ServiceNow Incident users need consistent controls that dynamically guide field behavior, validate important information, and reduce incorrect data entry.

Observation / Need	Project-specific finding
Conditional field control	Assignment group should become mandatory when Impact is 1 – High.
Controlled field behavior	Urgency should become read-only when the High Impact condition is active.
Automatic update	Urgency should be set to High when Impact changes to High.
Save validation	A High Impact Incident should not be saved when Assigned To is empty.
List interaction control	Direct State changes through Incident list editing should be prevented.

Step-2: Brainstorm, Idea Listing and Grouping

Idea Group	Brainstormed Ideas
UI Policy Controls	Create a High Impact Control UI Policy; make Assignment group mandatory; make Urgency read-only; use Reverse if false.
Automatic Field Behavior	Create an onChange Client Script for Impact; automatically set Urgency to High when Impact becomes High.
Save Validation	Create an onSubmit Client Script; prevent saving a High Impact Incident when Assigned To is empty; display clear validation feedback.
List Interaction	Create an onCellEdit Client Script; prevent direct State changes through Incident list editing; guide the user to update through the Incident form.

Step-3: Idea Prioritization

The ideas are considered using the template's importance and feasibility approach.

Prioritized Idea	Importance	Feasibility
High Impact UI Policy – Assignment group mandatory	High	High
onSubmit Assigned To validation	High	High
Urgency read-only UI Policy Action	High	Medium
onChange automatic Urgency update	Medium	High
onCellEdit State restriction	Medium	Medium

Selected Concept

Implement the solution using a combination of UI Policy, UI Policy Actions, and Client Scripts so that Incident field behavior is controlled conditionally, important values are handled automatically, invalid submissions are prevented, and unsupported list interactions are restricted.
